#### **QUESTION 1**

An organisation decided that it would set up blood donor clinics at various colleges. Students would donate blood over a period of 10 days. The number of units of blood donated per day by students of college X is shown in the table below.

DAYS	1	2	3	4	5	6	7	8	9	10
UNITS OF BLOOD	45	59	65	73	79	82	91	99	101	106

- 1.1 Calculate:
  - 1.1.1 The mean of the units of blood donated per day over the period of 10 days (2)
  - 1.1.2 The standard deviation of the data (2)
  - How many days is the number of units of blood donated at college X outside one standard deviation from the mean? (3)
- 1.2 The number of units of blood donated by the students of college X is represented in the box and whisker diagram below.

- 1.2.1 Describe the skewness of the data.
- 1.2.2 Write down the values of **A** and **B**, the lower quartile and the upper quartile respectively, of the data set. (2)
- It was discovered that there was an error in counting the number of units of blood donated by college X each day. The correct mean of the data is 95 units of blood. How many units of blood were NOT counted over the ten days?

The table below shows the number of hours that a sales representative of a company spent with each of his nine clients in one year and the value of the sales (in thousands of rands) for that client.

NUMBER OF HOURS	30	50	80	100	120	150	190	220	260
VALUE OF SALES (IN THOUSANDS OF RANDS)	270	275	376	100	420	602	684	800	820

- (2)
- 2.4 What is the expected increase in sales for EACH additional hour spent with a client?
